

# e-medic Power Strip MED5 ZPA

TÜV SÜD certified solid aluminum Power strip

This Power strip MED5 ZPA was designed for the operation in medical electric systems. It meets the standards DIN VDE 0620-1:2010 and EN 60601-1:2006 (Section potential equalization). With one additional connection for potential compensation per socket also meets requirements of the DIN 42801 specification. A locking clamp avoids unintentional adding or removing of single power plugs. Thus, electrical changes of the system can be prevented. It is used in areas, where a single fault condition in the power supply can cause danger to life. If for example, the mains power protective ground is broken.

Changes and errors excepted.

- ▶ TÜV SÜD certified, massive aluminum case Made in Germany
- ◀ 5 VDE certified socket inserts
- ▶ Double protection at each outlet using
- ◀ 2,5 mm<sup>2</sup> strong power cable with bend protection on the housing
- ▶ Trigger safety against unintended changes in the electrical system
- ◀ mountable on standard rails or carts

### Technical Data:

Fuse socket insert:	each 2 G fusion inserts 5 x 20 mm (DIN EN 60127 - 2/ VDE 0820-2)
ZPA plug:	according to DIN 42801
Load per socket:	max. 2000 W
Entire Power strip load:	max. 3600 W
Dimensions (L x W x H):	350 x 80 x 80 mm
Housing:	Full brushed aluminum, anodized
Standards:	DIN VDE 0620-1:2010 and EN 60601-1:2006 (Section potential equalization)
Cable length:	3m / 5m
